Cardboard Chair (Engineering Design Project)
Target Design Specifications, Prototyping, Stakeholder Analysis

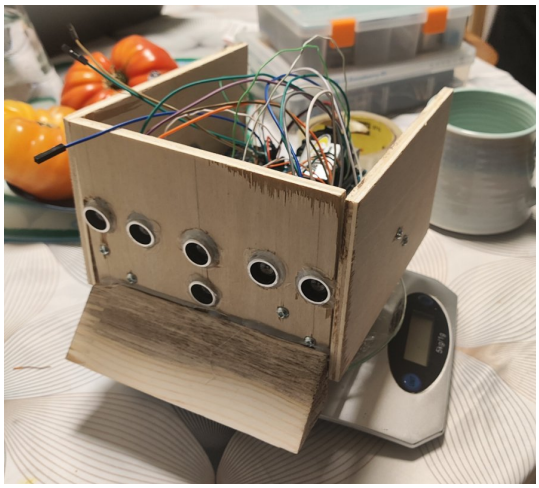

Deep Sea Recovery Claw (Engineering Design Project)
Arduino/C++, Sensor Integration, Rapid Prototyping, Risk Management

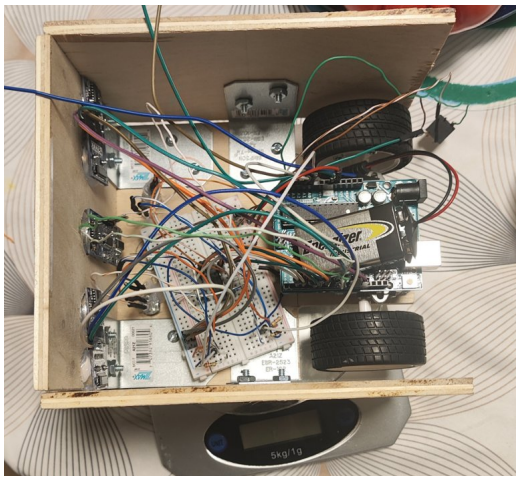

Assistive Technologies - Gardening (Engineering Design Project)
CAD - Solidworks, Canva, Elevator Pitch

SumoBot
Blender, Arduino/C++, Soldering

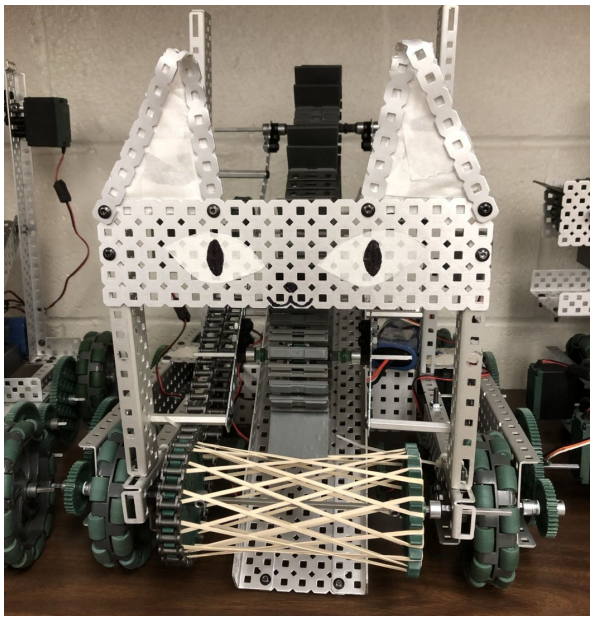

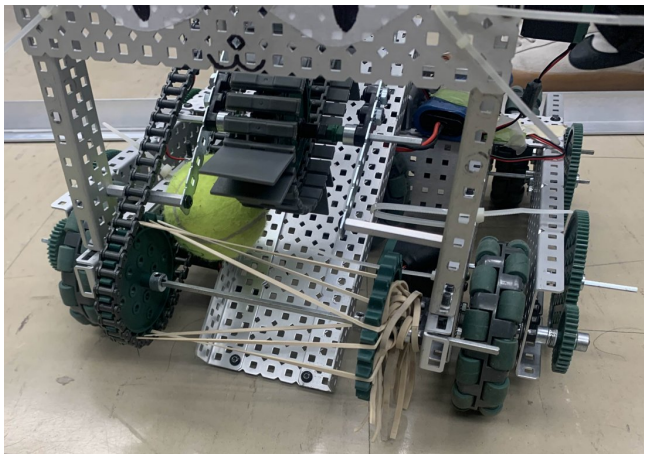

VEX Robotics

Mechanical Design, VEX Robotics System, Robotics Control

The Shutter (Game)

Unity3D, C#, Game Development

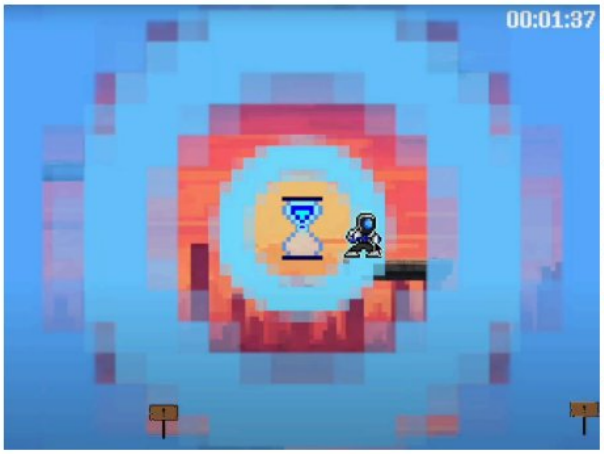

● Developed a first-person horror game focused on atmosphere, tension, and puzzle-solving.

● Implemented an event-driven enemy system using sound signals to drive transitions and behavior logic.
● Built a modular dynamic lighting system in Unity, balancing visual fidelity with performance constraints.
● Designed an interactive in-game computer interface with UI logic and game-state integration.
● Integrated a fully rigged 3D character with animation state machines driven by AI behavior states.

Chrono Crusader (Game)
Unity2D, C#, 2D Physics Engine

● Developed a 2D platformer centered around physics-driven movement and time manipulation mechanics.
● Implemented a complex, skill-based movement system where players move via delayed explosive forces.
● Designed a time-travel mechanic allowing players to alter their environment.
● Built a persistent achievement system that tracks progress across multiple playthroughs.
